The *British Journal of Dermatology* publishes papers on all aspects of the biology and pathology of the skin. Originally the Journal, founded in 1888, was devoted almost exclusively to the interests of the dermatologist in clinical practice. However, the rapid development, since the 1950s, of research on the physiology and experimental pathology of the skin has been reflected in the contents of the Journal, which now provides a vehicle for the publication of both experimental and clinical ethical research and serves equally the laboratory worker and the clinician. From time to time the Journal publishes reviews, which are usually invited, of recent advances in laboratory or clinical research, contact dermatitis, therapeutics and drug reactions. Regular features include original articles, concise communications, case reports, book reviews, correspondence, news and notices, and selected society proceedings. The Journal is the official organ of the British Association of Dermatologists but it attracts contributions from all countries in which sound research is carried out, and its circulation is equally international.

Papers accepted become the copyright of the Journal and an assignment form must be signed. This Journal is covered by *Current Contents, ISI/BIOMED, Medline Science Citation Index, ASCA and CABS.*
